Our Background

Founded by Dan and Brad Kinsey, Kinsey has provided software sales, implementation, support and development for over 30 years.

Lawson reseller and implementation partner since 1997

Lawson Certified Systems Integrator Partner

Lawson Complementary Software Partner

Lawson's "Go to" Reseller/Implementer for Public Sector

2 time Partner of the Year

Focusing on the development of Lawson complementary software products

kinsey[™]
WHEN EXPERIENCE MATTERS

CONSIDERATIONS

Most companies know of 2 options...

- build the model from scratch
- use pre-built security templates

CONSIDERATIONS

But how can you be sure that...

- your environment will be secure
- your auditors requirements will be met
- your users will be able to access what the need
- it will be flexible and easy to maintain

CONSIDERATIONS

Have you considered how you will...

- minimize duplicating forms in the model
- include your custom forms
- discover the forms actually required by your users
- discover the form permissions they will need
- minimize reconfiguration efforts
- build a model that will satisfy your auditors
- build a model that will not disrupt your users
- find the time to take on this project

CONSIDERATIONS

Or you could take a different approach...

- Use the information you already have to automatically build an audit compliant model

CONSIDERATIONS

So how do we do it?

- We base the model on actual user activity.
- Use our prebuilt SoD policies to ensure audit compliance.
- Provided reporting to validate that proper access has been granted.
- Continue monitoring user activity, security changes and SoD violations going forward.

LAUA Security Methodology

LAUA security is a structured Silo model built by creating Security Classes that restrict access to specific System Codes, Forms, Function Codes and Tables. A major restriction of this model is that it fails to provide any ability to share security settings between Security Classes. And since users can only be attached to a single Security Class, a slightly different job requirement requires an entirely new Security Class.

LAUA Silo Structure

IC01.1	IC06.1

IC12.2	IC262
IC15.1	IC280
IC20.1	IC20.4
IC20.2	IC21.1

- Full access is provided by default
- Security Classes restrict access to System Codes, Tables, Forms and Function Codes
- Users are attached to a single Security Class
- A slightly different role requires an entirely new Security Class

LS9 Security Methodology

Lawson has changed the security model to follow a role based structure. In this model Security Classes are created to group a series of forms together to accomplish a specific task. (i.e. AP Setup). These Security Classes (tasks) are then assigned to Roles within the organization (i.e. AP Manager). Security Classes can be shared between multiple roles and users can be assigned to more than one role in the organization.

LS9 Structure

No User access is provided by default

Security Classes (Tasks) grant specific Form, Function Code and Table access

Objects are shared between Roles and Users

Multiple Roles can be assigned to a User

What are our customers **biggest concerns?**

Accuracy

Resources

Cost

Time

BUILDING LS9

- » Define your organization's **Roles** (AP Manager, AP Clerk)
- » Define a list of operational tasks (AP Invoice Entry, Check Processing)
- » Assign form names to each **Task** (over 6500 forms)
- » Assign table names to each **Task**
- » Determine access **Rules** for each form (ACDINP+-)
- » Build your Task (Security Classes)
- » Build your Roles
- » Determine which forms each user needs to access for proper class assignments
- » Assign your Task (Security Classes) to your Roles
- » Assign your Roles to your Users
- » Implement form Rules
- » Build **conditional logic**
- » Perform positive and negative **Testing**

BUILDING LS9

- » Define your organization's **Roles** (AP Manager, AP Clerk)
- » Define a list of operational tasks (AP Invoice Entry, Check Processing)
- » Assign form names to each **Task** (over 6000 forms)
- » Assign table names to each **Task**
- » Determine access **Rules** for each form (ACDINP+-)
- » Build your Task (Security Classes)
- » Build your Roles
- » Determine which forms each user needs to access for proper class assignments
- » Assign your Task (Security Classes) to your Roles
- » Assign your Roles to your Users
- » Implement form Rules
- » Build **conditional logic**
- » Perform positive and negative **Testing**

The Challenge

Identifying and **Validating** the forms a User needs to access

Organizing over 6,500 forms and tables into Security Classes

Properly **restricting** function code access for each form

Building conditional rules

Verifying User security

Our **3 Step** Approach

We're with you every step of the way 

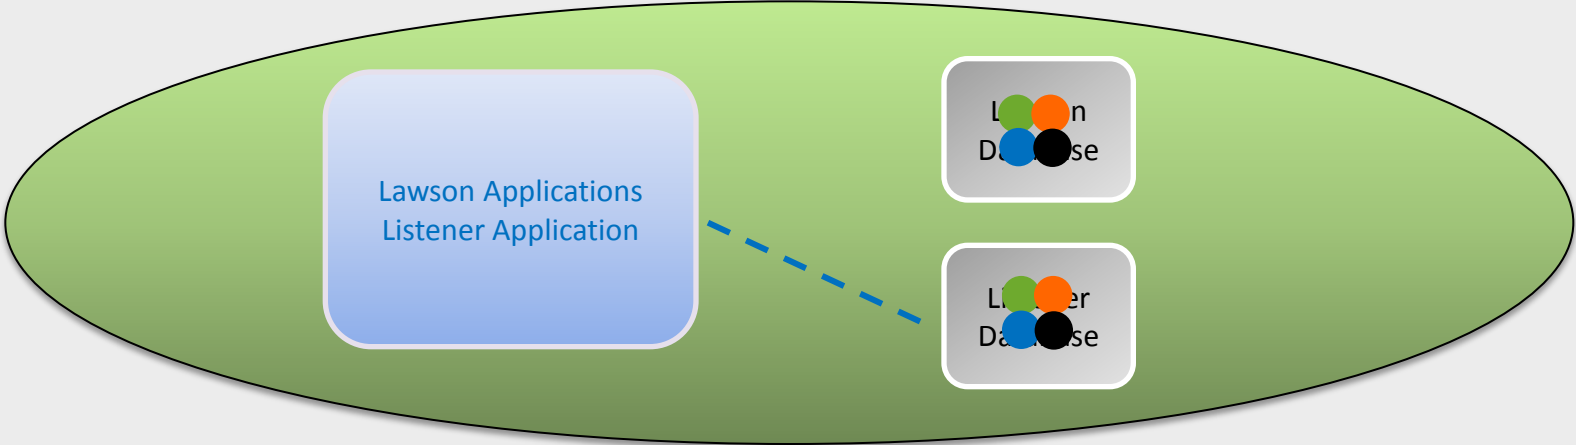

STEP 1 - TUNE

- » Use our **Listener** to find the forms that are being accessed
- » Analyze LAUA using our **SOD violation report**
- » Identity common access points between Security Classes to **eliminate redundant classes**

LISTEN

Collect data on who, when and how every form was used

LISTEN

The top worksheet shows a PivotTable with columns labeled A through AS and rows 4 through 43. The data is summarized as follows:

Row	A	AJ	AK	AL	AM	AN	AO	AP	AQ	AR	AS
4	PDLTOKEN	APIDAPGL	APIDPOWER	APMCPWR	APOHDATA	APOHPWR	APPAYER	APPROCESSR	APSCPOWER	APWMSSDATA	APWMSSPC
14	AP00.5

Use the **Listener Pivot tables** to analyze actual usage by Security Class/Form, User/Form, User/System Code, or System Code/Security Class

TOKENS NOT USED

The screenshot shows an Excel spreadsheet with the following columns: SysCd, Token, ACCT-AR-BL, ACCTARPRAP, ACCTGROUP1, ACCTSPAY1, ADM_RESTRI, ADMIN, AR-PR-HU, BL-USERSUP, BUCKLERS, COXS, HA-USER, HR-RW-USER, HR-USER, HU-USER, KENNEDYB, LONGS. The rows represent different tokens, with some cells highlighted in red and others in blue. The spreadsheet is titled 'Tokens Not Used.xls' and is in 'Compatibility Mode'.

The Tokens Not Used report combines LAUA access with user activity.

ANALYZE - REPORT

The LAUA Class comparison graph identifies the security classes that may be redundant.

ANALYZE

The screenshot displays the LAUA Analyzer application on the left and a Microsoft Excel spreadsheet on the right. The LAUA Analyzer interface includes a 'Lawson Server Selection' dropdown set to 'http://lfsserver.corpnet.lawson.com', a 'Saved Reports' list with 'Accounting', 'ALL Classes', 'AP/AM Classes', and 'AP20 all access' (each with a checkmark and an 'X' icon), and 'Report Options' with checkboxes for 'Forms', 'Tables', 'Table Conditional Logic', 'Data Security', and 'User Profiles'. The Excel spreadsheet, titled 'LAUA Exec Reporting NEW March 2011.xlsx', shows a table with columns for 'Sys Code', 'Form ID', 'Title', 'Available Functions', 'ACCT-CB', 'ACCT-SUPV', and 'Exceptions'. The table lists various forms and their security settings, with some rows highlighted in red to indicate 'FALSE' values in the 'Exceptions' column.

[Display All Conditional Logic](#) [Expand All](#)

HIDE Security Violation(s) for User ID: Sara Miller
[SHOW](#) - Category: CLOSING
[HIDE](#) - Category: RECEIVABLES

Rule Category: RECEIVABLES
 Rule Name: 44-49 Record Sales Orders conflicts with Independently Investigate A/R Discrepancies. If one individual has responsibility for more than one of these functions, that individual could misappropriate assets and conceal the misappropriation.
 Rule Logic: (OE110 or OE111 or OE114 or OE129) and (AR245 or AR264 or AR265)

Token	Exists in Security Class...	Token Description	Rule Reason	Rule Prediction/Conditions
OE110	Order/Entry1	Batch Order Release	GRANTED	ALL_ACCESS,
OE111	Order/Entry1	Electronic Payment Batch Order Release	GRANTED	ALL_ACCESS,
OE114	Order/Entry1	Ship Immediates	GRANTED	ALL_ACCESS,
OE129	Order/Entry1	Daily Shipment Journal	GRANTED	ALL_ACCESS,
AR245	AccountsReceiva1	Disputed Transaction Report	GRANTED	I,A,

Rule Category: RECEIVABLES
 Rule Name: 44-50 Investigate Discrepancies or Issues - Revenue conflicts with Record Sales Orders. If one individual has responsibility for more than one of these functions, that individual could misappropriate assets and conceal the misappropriation.
 Rule Logic: (OE110 or OE111 or OE114 or OE129) and (BL290)

Token	Exists in Security Class...	Token Description	Rule Reason	Rule Prediction/Conditions
OE110	Order/Entry1	Batch Order Release	GRANTED	ALL_ACCESS,
OE111	Order/Entry1	Electronic Payment Batch Order Release	GRANTED	ALL_ACCESS,
OE114	Order/Entry1	Ship Immediates	GRANTED	ALL_ACCESS,
OE129	Order/Entry1	Daily Shipment Journal	GRANTED	ALL_ACCESS,
BL290	Billing1	Sales Journal	GRANTED	ALL_ACCESS,

Rule Category: RECEIVABLES
 Rule Name: 44-51 Record Sales Orders conflicts with Maintain/Authorize Accounts Receivable Adjustments. If one individual has responsibility for more than one of these functions, that individual could misappropriate assets and conceal the misappropriation.
 Rule Logic: (OE110 or OE111 or OE114 or OE129) and (AR36.1 or AR36.2)

Token	Exists in Security Class...	Token Description	Rule Reason	Rule Prediction/Conditions
OE110	Order/Entry1	Batch Order Release	GRANTED	ALL_ACCESS,
OE111	Order/Entry1	Electronic Payment Batch Order Release	GRANTED	ALL_ACCESS,
OE114	Order/Entry1	Ship Immediates	GRANTED	ALL_ACCESS,

Segregation of Duties ensures an appropriate level of checks and balances upon the activities of individuals.

HIGHLIGHTS

- ✓ Takes advantage of the **knowledge** already put into LAUA security
- ✓ Utilizes **actual form usage** to fine tune security settings
- ✓ **Re-engineers** LAUA to automatically build your LS9 security model
- ✓ Includes all **Custom Forms** created in your system
- ✓ Leverages **Lawson's utilities** for building LDAP
- ✓ Takes **significantly less time** than other methods
- ✓ Requires **less of your resources**
- ✓ It's built around **your business practices**

Compliant, Secure, Flexible
