

machensoft™

BENEFITS

Industry-standard Middleware

Java-based, multi-protocol Enterprise Application Integration engine (EAI).

Lawson Aware

Machensoft's ESBus Integrator is Lawson aware, providing intelligent access to transactional metadata.

In-Bound Protocols

Machensoft's ESBus Integrator supports HTTP, JAVA, Web Services, COM+/.NET, JMS, MQ Series, File System, Terminal Apps.

Out-Bound Protocols

Machensoft's ESBus Integrator supports HTTP, JAVA, Web Services, COM+/.NET, System Commands, SQL, EDI, JMS, MQ Series, Audit Logs, and XML.

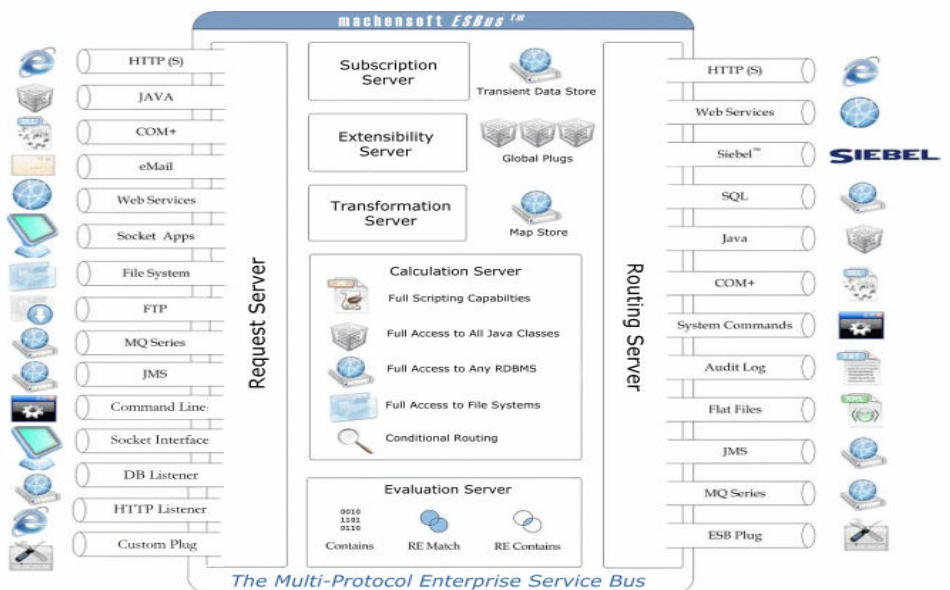

Custom Plugs

Given the wide technical alternatives for the invocation of ESBus, custom plugs can be written for virtually any system.

ESBus Integration Manager

Machensoft is Java-based middleware that allows unlike systems to communicate effectively, create process automations within or between applications, and is capable of capturing auditable history on virtually any type of transaction.

At the heart of the Machensoft Suite is the ESBus Integration Manager, a Rapid Application Development toolset for the Enterprise. With it's revolutionary 4 step process of capturing transactional metadata, it is the industry's fastest way to integrate\disparate applications. And with the support for the widest set of protocols, both inbound and outbound, it's as easy as *Capture, Review, Save, and Deploy.*

ESBus Integration Manager

The "old" way. Manual API's that are difficult to manage.

The "new" way. Machensoft middleware simplifies communication.

Machensoft's Java-based middleware allows clients to create a single interface between any application and the integration engine. There are numerous advantages to this method, including:

- Fewer connections to create
- Easier administration
- Need to modify only a single connection during application upgrades
- Flexible business rules engine
- Multiple protocols handled via a single interface
- Additional functionality available to programs without manipulating core code
- Runs on Virtually Any Platform: Unix, Windows, Linux, etc.
- Installs in days, not months
- Compatible with all versions of Lawson
- Not limited to Lawson applications
- Integrates virtually any system from mainframe to web services (xml, soap, .net, ajax, http, wsdl, cics, etc.)
