

# Transaction Auditing

Machensoft delivers an intuitive querying tool that is simple enough to require virtually no training, yet delivers point-in-time history for any transaction in the enterprise.

Users can define searches based on a combination of up to eight field values. The example below shows the results of one ad-hoc query. All columns and fields in the report are configurable by the end-user without having to manipulate any code.

Audit Date/Time	Username	IP Address	Product Line/Item	Key 1	Key 2	Key 3	Key 4	Key 5	Field Name	Dist Value	New Value	Trans Type
