

ACTIVITY MONITOR

Risk Management Solutions for Lawson S3

Simplify activity monitoring, reduce risks and increase the visibility to your system.

User Activity

Kinsey's Activity Monitor tracks all user activity from the first transaction processed through the last. Date and time stamps make it easy to see when users are accessing the Lawson S3 forms.

User Interface

All Lawson activity is tracked from either Lawson Smart Office, Portal, Mingle or Microsoft Add-in's.

Continuous Monitoring

Activity Monitor tracks all activity by User, Application UI, Date, IP Address, Screen Name and Function Code.

Transaction Detail

With the addition of the Kinsey Transaction Auditing application you can drill to specific changes or inquiries performed on any screen in Lawson.

Monitor Activity

Kinsey's Activity Monitor (Listener) provides insight to user activity in Lawson S3 applications. This application, also known as the 'Listener' will capture statistics and metadata on every Lawson S3 transaction processed including the user, date, time, form name, key and function code.

Manage Restrictions

With the added ability to manage when a screen can be used you can now easily restrict access to any process in Lawson without needing to change your security. Easily setup schedules when you want to block the use of any screen. The helps prevent unwanted changes to data during critical processing times.
